Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-9, drawn to variable voltage substrate, classified in class 252, subclass 511.
- II. Claims 10-11, drawn to a printed circuit board, classified in class 428, subclass 901.
- III. Claims 12-20, and 23-24 drawn to variable voltage device, classified in class 338, subclass 239.
- IV. Claims 21-22, drawn to a cable, classified in class 338, subclass 26.
- V. Claims 25-32, drawn to method of fabricating a device, classified in class 29, subclass 610.1.

Inventions II and I are related as mutually exclusive species in an intermediate-final product relationship. Distinctness is proven for claims in this relationship if the intermediate product is useful to make other than the final product (MPEP § 806.04(b), 3rd paragraph), and the species are patentably distinct (MPEP § 806.04(h)). In the instant case, the intermediate product is deemed to be useful as an electromagnetic shield and the inventions are deemed patentably distinct since there is nothing on this record to show them to be obvious variants. Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the

examiner finds one of the inventions anticipated by the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Inventions III-IV and V are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the process could be used to make a circuit board.

Inventions I/II and III-V are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions Group-I relates to a composition, which can be used as a conductive adhesive. Group V relates to a structure of a variable voltage device that could be used to make a circuit board. Group III relates to a device which could be a part of the printed board, and Group-IV relates to a cable that could be used as protection to a switch in any circuit or an inline surge arrestor. Groups II-IV could be made from a composition other than in Group-I.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, their recognized divergent subject matter, and the search required for any single group is not needed other groups and for

instance search required for Group I is not required for Groups II/III/IV/V, restriction for examination purposes as indicated is proper.

A telephone call was made to Robert W. Connors on 04/24/03 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
